

Playtesters Guide

Final Dissertation - Cambio Agent AI

Welcome! Thanks a lot for being willing to be a playtester for my thesis project; it's very useful for me. The scope of this project is to create an AI that can play the card game "Cambio" in an effective and engaging way for you, the player. This is really chill testing; I just need you to play normally and judge how you think both AI's are playing, which will probably take 10 -15 minutes to complete. There may be some small bugs here and there; please try to ignore them since they are out of the scope of this project, as I had 3 months to work on it.

Steps to complete the playtest session

1. Keep in mind this is a take on Cambio, so if you know how to play the original card game, some rules may be different. To understand this and know how to play, please read the **Cambio Rules** PDF file. Then open the game executable inside the folder called **Game Folder**.
2. The game will ask you at some point to grant access to your downloads folder; please say yes; it is just to store some CSV files with data from the AIs.
3. After your playtest is done, zip both **BensGamesData** and **EvasGamesData** and send them to chasigamesdev@gmail.com with the subject being "Agents Data" and your name.
4. Finally, answer this forms: <https://forms.gle/NuxrcpCrpmsfQy3y5>

Thank you very much again for your help! If you would like to be in the credits of my thesis, please let me know in the same email :)
